Psychology
PAPER 2

You must have:
Calculator, ruler

Total Marks

Instructions

- Use **black** ink or ball-point pen except for graphs where you should use a pencil.
- **Fill in the boxes** at the top of this page with your name, centre number and candidate number.
- There are six sections in this question paper.
Section A – answer **all** questions in Section A
Sections B to F – select **two** sections from B to F. Answer **ALL** questions in these sections.
- Answer the questions in the spaces provided
– *there may be more space than you need.*
- Calculators may be used.
- You must show **all your working out**, with **your answers clearly identified** at the **end of your solution**.

Information

- The total mark for this paper is 79.
- The marks for **each** question are shown in brackets
– *use this as a guide as to how much time to spend on each question.*
- In questions marked with an **asterisk** (*), marks will be awarded for your ability to structure your answer logically, showing how the points that you make are related or follow on from each other where appropriate.

Advice

- Read each question carefully before you start to answer it.
- Check your answers if you have time at the end.

SECTION A

Research methods – How do you carry out psychological research?

Answer ALL questions in this section. Write your answers in the spaces provided.

Some questions must be answered with a cross in a box ☒. If you change your mind about an answer, put a line through the box ☒ and then mark your new answer with a cross ☒.

1 Identify the ethical issue that has been dealt with when a researcher tells participants the true aims of a study before they decide to take part.

- A Confidentiality
- B Informed consent
- C Right to withdraw
- D Protection of participants

(Total for Question 1 = 1 mark)

2 Jason is planning to use a questionnaire to investigate whether there is a difference in the use of social media by people of different ages.

(a) Give **one** open-ended question and **one** closed-ended question that Jason could use in his questionnaire.

(2)

Open-ended question

.....

.....

.....

Closed-ended question

(Total for Question 2 = 5 marks)

3 Savannah is investigating whether there is a relationship between listening to music and happiness. She asked participants to record the number of hours they spent listening to music in a week. They also scored their level of happiness on a scale of 1 (being very unhappy) to 10 (being very happy).

Savannah sampled a total of 180 participants aged between 18 years old and 65 years old. A third of her sample were aged between 18 years old and 25 years old.

(a) Calculate the range for the age of all participants. (1)

Range

(b) Calculate the ratio of participants aged between 18 years old and 25 years old to the remaining participants in the sample used by Savannah. (2)

Ratio

(c) Savannah found that those listening to less than one hour of music in a week scored themselves at 2 or below on the happiness scale. Happiness scores increased for those who listened to more music, with those who listened to over 12 hours of music in a week usually scoring 9 or above.

Explain **one** conclusion that Savannah could make from her findings about the relationship between music and happiness. (2)

(Total for Question 3 = 5 marks)

- 4 Pedro was investigating whether schemas have an influence on memory accuracy. He decided to test four students from his psychology class.

He placed 10 typical objects, such as a chair, and 10 unusual objects, such as a laundry basket, in a classroom. The students had to enter the room and look around for one minute.

Pedro recorded the number of typical objects and unusual objects students could remember.

The results of Pedro's investigation are shown in **Table 1**.

	Number of typical objects recalled (out of 10)	Number of unusual objects recalled (out of 10)
Student A	8	3
Student B	10	5
Student C	9	5
Student D	5	2

Table 1

- (a) Calculate the percentage of students who recalled **more than five typical objects**, out of all the students in the investigation.

(1)

Percentage

(Total for Question 4 = 6 marks)

5 Rocio conducted a case study on her patient who had an addiction to alcohol. She worked with the patient for six months to help treat their addiction.

(a) Define what is meant by a 'case study'.

(1)

.....

.....

.....

(b) Rocio recorded the conversations with the patient as part of her case study. She also monitored the alcohol consumption of the patient in units of alcohol (one unit of alcohol = 10 ml).

Her results are shown in **Table 2**.

Month	Total alcohol consumption in units
March	298
April	221
May	181
June	140
July	99
August	59

Table 2

Describe, using an example from Rocio's case study, what is meant by 'quantitative data'.

(2)

.....

.....

.....

.....

.....

.....

- (c) Estimate the number of units of alcohol that the patient has reduced their consumption by between March and August.

(1)

Estimation

- (d) For the months of March and April, Rocio recorded the patient's alcohol consumption each week. Her results are shown in **Table 3**.

Week	Total alcohol consumption in units
March Week 1	79
March Week 2	77
March Week 3	72
March Week 4	70
April Week 1	79
April Week 2	63
April Week 3	45
April Week 4	34

Table 3

Calculate the mode for the units of alcohol consumed by the patient using **Table 3**.

(1)

Mode

(e) Calculate the median score for the units of alcohol consumed by the patient using **Table 3**. (2)

Median

(f) On one day in March, the patient drank a total of 12.81924 units of alcohol.
Give the units of alcohol to **two** decimal places. (1)

40 Dolly asked students on her university campus to rate the two emoticon symbols shown in **Figure 1** on a scale of how much happiness they symbolised.

Figure 1

A score of zero represented 'very unhappy' and a score of 10 represented 'very happy'. She also asked the students to write down what country they were from.

Dolly worked out the average scores, the results were:

- Students from Western countries scored emoticon A at five, and B at four
- Students from Eastern countries scored emoticon A at eight, and B at three.

Explain **two** ways the findings from Yuki et al. (2007) could account for Dolly's results.
