Chemistry

UNIT 3

Science (Double Award) (Modular)

You must have:

Calculator, ruler

Total Marks

Instructions

- Use **black** ink or ball-point pen.
- **Fill in the boxes** at the top of this page with your name, centre number and candidate number.
- Answer **all** questions.
- Answer the questions in the spaces provided
– *there may be more space than you need.*

Information

- The total mark for this unit is 60.
- The marks for **each** question are shown in brackets
– *use this as a guide as to how much time to spend on each question.*

Advice

- Read each question carefully before you start to answer it.
- Try to answer every question.
- Check your answers if you have time at the end.

Answer ALL questions.

Some questions must be answered with a cross . If you change your mind about an answer, put a line through the box and then mark your new answer with a cross .

- 1 The diagram shows the electronic configuration of an atom of an element.

- (a) Name the part of the atom that contains the protons and neutrons. (1)

- (b) Give the number of protons in this atom. (1)

- (c) Give the number of the group that contains this element. (1)

- (d) Give the number of the period that contains this element. (1)

(Total for Question 1 = 4 marks)

2 This question is about changes of state and separation of mixtures.

(a) The box shows some changes of state.

boiling	condensation	evaporation
freezing	melting	sublimation

The table lists some physical changes.

Complete the table using words from the box to show the change of state for each physical change.

(4)

Physical change	Change of state
water to ice	
steam to water	
solid wax to liquid wax	
iodine crystals to iodine vapour	

(b) A student plans to obtain salt solution from a mixture of salt and sand.

The student adds pure water to the mixture to dissolve the salt.

State two things the student could do to make the salt dissolve quickly.

(2)

1

2

(c) Some mixtures can be separated using paper chromatography.

The diagram shows a chromatogram of the food dyes in four different food colourings, A, B, C and D.

(i) Give the letter of the food colouring that contains three different food dyes. (1)

(ii) Give the letters of the two food colourings that contain the same dye. (1)

(iii) Using the scale on the diagram, determine the R_f value of the dye in food colouring C. (2)

$R_f =$

(iv) Give a reason why the dye in food colouring D moves the furthest from the start line. (1)

(Total for Question 2 = 11 marks)

3 Crude oil is an important source of organic compounds.

(a) The diagram shows how crude oil can be separated into fractions by fractional distillation.

(i) State what happens to the crude oil when it is in X.

(1)

(ii) Give the name of fraction E.

(1)

(iii) Give a use for fraction A.

(1)

(b) One of the compounds in fraction D is tridecane ($C_{13}H_{28}$) which can be cracked to form shorter-chain hydrocarbons.

(i) State the catalyst and temperature used in this cracking reaction.

(2)

catalyst

temperature

(ii) The equation shows an example of a catalytic cracking reaction.

Give **two** reasons why this reaction is important.

(2)

1

.....

2

.....

(c) Sulfur is an impurity in crude oil.

Explain why this is a problem for the environment.

(3)

- 4 The reactions of metals with water and with dilute sulfuric acid can be used to determine the order of reactivity of the metals.

The table shows the reactions of four metals, W, X, Y and Z, with water and with dilute sulfuric acid.

Metal	Reaction with water	Reaction with dilute sulfuric acid
W	no reaction	no reaction
X	very slow reaction	reacts quickly
Y	no reaction	reacts slowly
Z	reacts quickly	reacts violently

- (a) What is the order of reactivity of these metals?

(1)

Most reactive \longrightarrow least reactive

- | | | | | | |
|--------------------------|----------|---|---|---|---|
| <input type="checkbox"/> | A | W | X | Y | Z |
| <input type="checkbox"/> | B | Z | X | Y | W |
| <input type="checkbox"/> | C | W | Y | X | Z |
| <input type="checkbox"/> | D | Z | Y | X | W |

- (b) (i) State which metal, W, X, Y or Z, could be copper.

(1)

- (ii) State which metal, W, X, Y, or Z, could be magnesium.

(1)

BLANK PAGE

- 6 A student uses this apparatus to investigate the temperature change that occurs when ammonium nitrate is dissolved in water.

The student uses this method.

- put 100 cm^3 of water into the polystyrene cup and measure the initial temperature of the water
- add 8.00 g of ammonium nitrate and stir
- record the lowest temperature reached by the solution

The table shows her results.

Initial temperature of water in $^{\circ}\text{C}$	20.0
Lowest temperature of solution in $^{\circ}\text{C}$	14.2

- (a) Use the results of the experiment to explain what type of reaction is taking place when ammonium nitrate is added to water.

(b) Show that the heat energy change, Q , is about 2400 J.

[mass of 1.00 cm^3 of solution = 1.00 g]

[for the solution, $c = 4.18 \text{ J/g/}^\circ\text{C}$]

(3)

$$Q = \dots\dots\dots \text{ J}$$

(c) Use your answer to part (b) to calculate the enthalpy change, ΔH , in kilojoules per mole of ammonium nitrate.

[M_r of ammonium nitrate = 80.0]

Include a sign in your answer.

(4)

$$\Delta H = \dots\dots\dots \text{ kJ/mol}$$

(Total for Question 6 = 9 marks)

7 A salt can be made by reacting an acid with an insoluble base.

A student has a sample of copper(II) oxide.

The student uses this method.

- Stage 1 pour 50 cm³ of dilute sulfuric acid into a beaker
- Stage 2 warm the acid using a Bunsen burner
- Stage 3 add a small amount of copper(II) oxide to the warm acid and stir the mixture
- Stage 4 add further amounts of copper(II) oxide until copper(II) oxide is in excess
- Stage 5 filter the mixture
- Stage 6 obtain crystals from the filtrate

(a) State why the acid is warmed in stage 2.

(1)

(b) State how the student would know that the copper(II) oxide is in excess in stage 4.

(1)

(c) State why the mixture is filtered in stage 5.

(1)

(d) State the colour of the filtrate obtained in stage 5.

(1)

(e) Describe how the student could obtain a pure, dry sample of hydrated copper(II) sulfate crystals from the filtrate in stage 6.

(5)

DO NOT WRITE IN THIS AREA

DO NOT WRITE IN THIS AREA

- (f) The overall equation for the formation of hydrated copper(II) sulfate crystals from copper(II) oxide is

- (i) In an experiment, a student completely reacts 9.54 g copper(II) oxide.

Show that the maximum possible mass of $\text{CuSO}_4 \cdot 5\text{H}_2\text{O}$ crystals that can be obtained is about 30 g.

$$[M_r \text{ of CuO} = 79.5 \quad M_r \text{ of CuSO}_4 \cdot 5\text{H}_2\text{O} = 249.5]$$

Give your answer to an appropriate number of significant figures.

(3)

mass = g

- (ii) In this experiment, the actual yield of $\text{CuSO}_4 \cdot 5\text{H}_2\text{O}$ crystals is 23.92 g.

Calculate the percentage yield of $\text{CuSO}_4 \cdot 5\text{H}_2\text{O}$

(2)

percentage yield = %
